

Job Description

1. Job Title and Summary

Role: Full-Stack Developer

Summary: This entry-level position supports the design, development, and deployment of web and mobile applications using frontend and backend technologies. The role exists to help build scalable digital platforms while gaining real-world development experience and contributing to critical product features.

2. Responsibilities

- Build and maintain frontend interfaces using React and TailwindCSS
- Develop RESTful APIs using FastAPI
- Design and connect databases with SQLAlchemy and PostgreSQL
- Implement authentication and user authorization with JWT
- Integrate third-party services (Stripe, SendGrid)
- Participate in version control using Git/GitHub
- Collaborate through daily task boards and weekly sprint goals

3. Required Skills and Tools

- **Languages:** Python, JavaScript (ES6+), HTML/CSS
- **Frameworks:** React.js, FastAPI
- **Tools:** Git, GitHub, Postman, Vercel, Render, Stripe API
- **Soft Skills:** Teamwork, time management, communication, adaptability

4. Sample Deliverables

- Full authentication flow (signup/login with JWT)
- Product management admin dashboard
- Order confirmation and delivery estimate system
- Responsive checkout and wishlist components
- Size recommendation API and frontend interface

5. Ideal Work Environment

- **Company Type:** Startup or small e-commerce business
- **Work Style:** Combination of independent and team-based tasks. Agile sprints, flexible hours, frequent check-ins. Remote-friendly environment using collaborative tools.

6. Growth Style and Rigor

- **Pace:** Moderate to fast-paced with real-world deadlines
 - **Support:** Access to mentorship (online communities or lead dev), structured learning tasks, guided tech stack use
 - **Freedom:** Room for creativity in UI/UX, code structure, and integration
 - **Rigor:** Strong emphasis on debugging, documentation, and deployment best practices
-

Tools & Technologies

Frontend:

- React.js (Web)
- React Native (Optional for mobile app)
- TailwindCSS
- JavaScript (ES6+)
- Axios (API communication)

Backend:

- Python (FastAPI)
- REST API
- JWT Authentication

Database:

- PostgreSQL via SQLAlchemy (production)
- SQLite (development)

Authentication:

- JWT tokens with FastAPI Users or manually

Payments:

- Stripe API (Test and Live modes)

Notifications:

- SendGrid (emails)
- OneSignal (optional push notifications)

Hosting:

- Vercel (frontend)
- Render or Railway (backend)

Version Control:

- Git & GitHub

Project Management:

- Notion or Trello (Daily/Weekly Tracker included below)
-
